

ITAI 13: Introduction to Artificial Intelligence

Midterm: Contribution Journal

Group Name: 14274 2_ITAI1371

Contributors:

Marisabel Morales

Joshua Balderas

Katherine Rodriguez

Midterm Contribution Journal

Real Estate EDA and Preprocessing

For the Midterm project, our group divided the responsibilities among the three team members.

Joshua and Katherine were responsible for researching and selecting the dataset for the project. Together, they selected the Real Estate dataset from Kaggle and presented it to the professor for approval. The dataset was approved and became the foundation for the Midterm project and future machine learning work.

Marisabel and Joshua was responsible for the coding portion of the Midterm project. They worked with the approved Real Estate dataset and developed the Jupyter Notebook used for Exploratory Data Analysis and preprocessing. Their work included creating the 70/30 training and testing split, exploring the training data, checking missing and invalid values, handling duplicates, feature engineering, normalization, feature scaling, One-Hot Encoding, creating before-and-after visualizations, and exporting the final cleaned training dataset. They also ensured that the testing dataset remained separate and untouched during the Midterm preprocessing process.

Joshua was responsible for preparing the group Reflection Journal. He reviewed the completed Midterm workflow and documented the group's understanding of the Exploratory Data Analysis and preprocessing process, including the lessons learned from preparing a real-world dataset for future machine learning.

Katherine was responsible for preparing the Contribution Journal. She documented how the responsibilities were divided among the team members and described each member's participation in the Midterm project.

Overall, Joshua and Katherine completed the dataset research and selection, Marisabel completed the coding and preprocessing workflow, Joshua completed the Reflection Journal, and Katherine completed the Contribution Journal. Each member had a defined responsibility that contributed to the completion of the Midterm project.
